

MAXX Floors™ LooseLay Acoustical Flooring is a perfect alternative to traditional glue down because its construction offers the equivalency of flooring with an acoustical pad and a soft underlayment. MAXX Floors' LooseLay is finished with a highly scratch resistant Ultra-Shield™ ceramic bead coating designed to provide maximum protection against scuffs, scratches, and dents. With an STC of 60, and an IIC of 50, this product is a great product for applications where you either need waterproof flooring, or built in acoustics for our flooring applications. By using this system, you eliminate the need to purchase an acoustical pad and save a substantial amount on extra installation and material costs, while providing a superior product designed to last for years.
