

MAXX Floors™ WPC Click flooring is waterproof and depending on the condition of the subflooring, it can go over most subfloors with little-to-no subfloor preparation as compared to the requirements of other types of flooring, and when combined with our 2mm EVA sound pad, it becomes **AcoustiMAXX™ WPC Click**, and offers many other advantages: 1) more comfort and cushion, 2) improved acoustics that significantly reduces sound transfer between floors, and 3) the EVA pad helps further to absorb minor defects in the subflooring that would otherwise project through the flooring or allow undesirable movement of the flooring. AcoustiMAXX WPC Click flooring includes an Ultra-Shield™ topcoat – a highly scratch resistant ceramic bead coating designed to provide maximum protection against scuffs, scratches, stains and dents.

Suggested Applications

Features

- Multi-family housing
- Student housing
- Senior Living Facilities
- Hospitality
- Commercial
- Offices

- Ultra-Shield: Scratch Resistant
- Waterproof
- Acoustical Pad Included
- Reduced Impact Sound
- Hides Subfloor Imperfections
- Low Maintenance
- Dimensionally Stable
- Simplified Installation
- Anti-Slip
- Anti-Static
- Durable
- 100% Recyclable

MAXX Floors' WPC Click flooring also features **14F**, a patented technology that substantially improves and simplifies the installation and maintenance of click flooring. Up to 30% faster installation time than basis angle/angle systems. No special tools needed. Its triple-lock system prevents water from penetrating your subfloors.

MAXX Floors products are designed with your health and the environment in mind. Our vinyl flooring products are tested to meet the highest health and safety standards and are constructed with virgin vinyl and contains no hazardous metals or chemicals.
